

Class up your life  
with our **safety** lock.

**MAZI**  
Premium Smart Doorlock

### Other products

#### Push Pull type Main key

##### MAZI H-7090 Standard hole

- Unlocking methods : 4 ways
- Fingerprint + Passcode + Card + Emergency key
- Fingerprint algorithm authentication (Korea Internet & Security Agency (KISA))
- Pattern authentication and security
- Bluetooth authentication (optional)

##### MAZI H-7000 Standard hole

- Unlocking methods : 3 ways
- Passcode + Card + Emergency key
- Pattern authentication and security
- Bluetooth authentication (optional)

#### Handle type Main key

##### MAZI H-2500 Standard hole

- Unlocking methods : 3 ways
- Passcode + Card + Emergency key
- Bluetooth authentication (optional)

##### MAZI H-5100 Hole-less

- Unlocking methods : 3 ways
- Passcode + Card + Emergency key
- Bluetooth authentication (optional)

#### Handle type Mini Main key

##### MAZI H-3000 / Mini Main Key Hole-less

- Unlocking methods : 3 ways
- Passcode + Card + Emergency key

##### MAZI H-3300 Hole-less

- Unlocking methods : 3 ways
- Passcode + Card + Emergency key

#### Deadbolt type Auxiliary Lock

##### MAZI M-1100S

- Unlocking methods : 2 ways
- Passcode + Card

##### MAZI H-1200S

- Unlocking methods : 2 ways
- Passcode + Card

**Premium**  
Smart Digital  
Doorlock System

**Add value** for safety  
and convenience  
in our lives.

**MAZI**  
Premium Smart Doorlock

# MAZI Premium Smart Doorlock

For our security,  
Digital door Lock  
A new history begins.

## Unlock the Door with a Single Touch One-step Fingerprint Recognition System

A **one-step** unlocking mechanism that allows users to securely confirm their identity with their fingerprints. Register up to 100 fingerprints based on the KISA-certified fingerprint algorithm.

The first digital doorlock with a pattern-based locking mechanism

Pattern Swipe

## Without Anyone's Knowledge Safe Handle Security

A **smart doorlock** allowing users to set the anti-crime locking mode without any errors and to lock the handle without anyone's knowledge.

## New and Easy Pattern Lock for a Digital Doorlock

A **smart doorlock** allowing users to use a pattern lock, as they would on their smartphones, for an easy locking process.

## MAZI - 7200 / 7290 (Fingerprint Recognition)

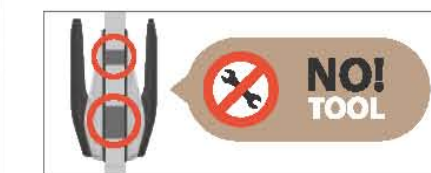

- A hole-less main key doorlock that is easy to install for anyone
- A push-pull mechanism that is easy to operate
- The first doorlock with a one-step fingerprint recognition system on the back of the handle
- The first doorlock with a pattern authentication system
- A pattern locking mode and safe handle for improved security
- A Bluetooth compatible doorlock that allows users to authenticate on their smartphones
- An anti-condensation integrated handle that is easy to install

# MAZI Premium Smart Doorlock

## An integrated handle for easy operation

The large handle makes it easier for children and seniors to use. All of the electronic circuits are embedded inside the handle to prevent condensation inside the doorlock.

## Hole-less main key for easy installation

It is easily detachable, and no holes need to be drilled into the door for its installation. It is a DIY-type doorlock that can be installed even on fireproof doors without any reinforcement plates, thereby reducing the need to seek assistance from a professional during installation and repair.

## Bluetooth connection with smartphones

You can use the smartphone app for the digital doorlock authentication and setup processes. You can share and manage the locking/unlocking time records and history to prevent security problems in advance and deal with a security breach effectively.

## Anti-panic push-pull bar

It is equipped with an anti-panic bar, which allows the door to open just by pushing the handle. This allows the people inside to evacuate quickly and safely in the event of emergency such as a fire.

## Smart etiquette and privacy protection

Users can temporarily disable the key input and door unlocking sound to enter and exit their homes quietly. This is especially useful for users with small children, and a way to be considerate of your neighbors when leaving your home late at night.

## A completely new pattern-based authentication system

Unlike the conventional method of pressing a single button to switch to the anti-crime locking mode, a pattern lock can be used to prevent an erroneous setup. The safe handle, which automatically locks the handle from the inside, also helps improve security.

## Dual latch compatibility for improved preparation for a fire

The doorlock has been designed to be compatible with dual latch doors that are used to reinforce the fire-resistance performance of fireproof doors. The doorlock itself has a high fire-resistance performance, and you can rest assured that you'll be safe even in the event of a fire.

## Function & Specification

- |                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                                                                                                                                                                                                             |                                                                                                                                                                                                                                                        |
